Katherine, the same thing happened to me. The saemslan payment systems came at peak customer time, although I asked him to be there before. Being in a big hurry, I allowed him to persuade me to sign a global leasing contract with the promise that he would return the completed signed copy the next day. I didn't get it back until next week. It was filled well, the name of the contract was changed to the name of the company, my signature was changed, the equipment was doubled, and the rental price was \$149.00 per month plus other fees. The total price of the terminal would be almost \$8,000.00 (I bought one for \$250.00 later). After the payment systems deducted \$3000 from my bank account for 17 months, I finally stopped automatic payments. Now they're threatening to sue me. I'm going to get them on charges of forgery. Wish me luck. Many people come here wondering why there is a fee in their credit card from BANKCARD-BTOT-DEP. They usually don't like to hear that this is probably a scam. No problem, read it all and we will teach you how to stop this scam and get your money back. Here's a rundown on trading services and then a resource center so you can find which payment solutions and provider your business needs to thrive. Here's the thing: you can't accept credit cards without a trading provider. Trade service providers (MSPs) are also referred to as trade suppliers or banks-equivalents. They are a bridge between your business bank account and the bank account of your customers who use credit cards. They reliably move the means of payment from one to the other. MSPs provide credit card cards hardware and software like credit card terminals, point-of-sale systems, and online payment gateways (more on all those below!). When you accept a credit card through one of these channels, the payment software transfers transaction data to the relevant member of the payment card industry, such as Visa or MasterCard, who then contacts the credit card issuer to check for funds or credit limits. If the payment is allowed by the card issuer, the permission is transferred back to the payment system and accepted by credit card payment. Ms. MSP then collects funds and pays them in batches into business through a trading account. Every time a customer uses a credit card to buy something, there is a lot going on behind the scenes in the second or two he takes to process the payment. Trading services are really a competitive space and you will want to gain as much knowledge as possible before you sign up with a merchant account provider. Because trading services come at a cost, you want to be able to sift through hundreds of suppliers who want your business to find the best services at the best price. This is a good place to start! Below you'll find resources about the different types of electronic payments MSPs can help you with, more on how they are handled, questions to ask potential MSPs, and general payment tools for businesses of all kinds.
